## JUNIOR BLOCKCHAIN DEVELOPER

### About me

I am a Junior Blockchain Developer with experience in building Django and NextJS web applications that incorporate the benefits of blockchain technology, including Solidity smart contracts. I'm seeking new job opportunities that will make me grow both personally and professionally and I'm excited to take on new exciting challenges.

### Education

#### (Jan-Oct 2023) Master in Blockchain Development

*Start2Impact University*

At Start2Impact, I learned coding theory certified by written exams and independently built 5 practical projects, all of which were reviewed by field experts. This hands-on experience enhanced my skills in Python, Django, JavaScript, HTML & CSS, Web3 and Solidity. Here you can take a look at my [projects portfolio](#).

#### (Sep 2018-June 2022) Computer Science High School

*Istituto Tecnico Informatico Corni, Modena*

I attended Computer Science High School where I learned computer science principles and programming languages basics. However, I decided to drop out of school in order to actively seek opportunities in manual labor while studying Blockchain Development at Start2Impact University.

### Work Experience

#### (March 2023 - Present) Part-time Waiter

*Roadhouse S.p.A., Modena*

While working as a waiter at Roadhouse, I improved my interpersonal skills and enhanced my teamwork abilities.

### Hobbies and Interests

I have been passionate about cryptocurrencies since I first discovered Bitcoin in 2021. I believe that blockchain is a disruptive technology that will change our world, so it deserves to be studied and supported.

In my free time, I enjoy cycling in the nature to recharge myself and keep a good work-life balance.
