Italian	100%
English	80%

Riccardo Santi

JUNIOR BLOCKCHAIN DEVELOPER

I am a junior blockchain developer passionate about cryptocurrencies and outdoor activities. I recently completed a course that gave me a strong foundation in Solidity smart contract development.
I am seeking job opportunities in web3 that will make me grow and I am available for internships. I am ready to move to other cities in Emilia Romagna and I am open to hybrid work solutions.

Education

(Jan-Oct 2023) Master in Blockchain Development

Start2Impact University

Start2Impact University is an online platform where students can study the fundamentals of digital topics and put them into practice in individual projects reviewed by field experts.
After learning the basics of Ethereum blockchain and the smart contracts, I developed 4 full-stack websites with various ways of blockchain usage. In the most challenging project, for example, I wrote and implemented a smart contract enabling users to purchase customized Nfts through Metamask. I mainly used Solidity, Remix IDE, Python, Django, JavaScript, NextJs, Web3.py, Ethers.js and Github.

(2018-2022) Computer Science High School

F. Corni Computer Science High School, Modena

I attended a Computer Science High School where I learned computer science principles and programming languages basics.

Work Experience

(March 2023 - Present) Part-time Waiter

Roadhouse S.p.A., Modena

While working as a waiter at Roadhouse, I improved my interpersonal skills and enhanced my teamwork abilities.

Hobbies

I have been passionate about cryptocurrencies since I first discovered Bitcoin in 2021. I believe that blockchain is a disruptive technology that will change the finance world, so it deserves to be studied and supported. In my free time, I enjoy cycling in the nature to recharge myself and keep a good work-life balance.
